pulseCheck The Modular Autocorrelator

Pulse Measurement Perfection with the Multitalent from APE

It is good to have plenty of options at hand. Suitable for the characterization of virtually any ultrafast pulsed laser, the pulseCheck autocorrelator from APE covers the broadest possible range of wavelengths and pulse widths. This flexibility is achieved by using exchangeable Optics Sets, typically consisting of a nonlinear crystal and a dedicated detector module.

- Exchangeable Optics Sets for broadest spectrum coverage from 200 nm to 12 μm
- Pulse widths from as low as < 10 fs all the way up to 500 ps</p>
- Ultra-precise delay resolution
- **T**oggle between interferometric and intensity autocorrelation
- Wide range of sensitivity levels covered with PMT, PD, and TPA
- Automatic phase matching
- Gaussian, Sech², and Lorentzian fitting routines
- Ready to use software and USB interface
- TCP/IP remote control with standardized command set for easy programming
- NIST traceable calibration
- □ Option: FROG for complete pulse characterization

... Flexibility for your Experiments

Maximum Functionality through Modular Design

• APE fulfills a growing need for maximum functionality and flexibility with the modular concept on which its pulseCheck autocorrelator series is based.

1. From Ultrashort to Longer Pulses

The various pulseCheck configurations can be optimized accordingly to suit your individual pulse width measurement needs. Extra-long pulse durations are accessible with pulseCheck SM, which utilizes fast and highly precise stepping motor technology to measure long pulses across a larger scan range.

2. High Sensitivity and Low Noise with Three Types of Detectors

The three detector types address the need for low noise and enhanced sensitivity in different applications. For pulse measurement with extreme sensitivity and low pulse energy, we recommend our photomultiplier (PMT) detector. Spectrally enhanced photodiodes (PD, TPA), on the other hand, are the ideal choice for measurements requiring sensitivities of a few mW².

| Photodiode Detector (PD) | Standard sensitivity up to 1 W^2 |
|---|--|
| Photomultiplier (PMT) | Highest sensitivity up to 10^{-6} W ² |
| Two Photon Absorption (TPA) | High sensitivity up to 10^{-2} W ² |

pulseCheck Unprecedented Wavelength Range

3. Ultimate Wavelength Range

The detectors and Optics Sets available from APE cover a wide range of wavelengths, from UV at 200 nm to Mid-IR at 12 µm.

Photodiode (PD)

Photomultiplier (PMT)

• Typ. Sensitivity: up to 10⁻⁶ W² • Rep. Rate: > 250 kHz • Measurement Mode: Collinear and Non-collinear

Two Photon Absorption (TPA)

• Typ. Sensitivity: < 0.1 W² (NIR/IR) < 500 W² (UV) < 50 W² (VIS) • Rep. Rate: > 10 Hz • Measurement Mode: Collinear Intensity

* For cross-correlation, wavelength range depends on pump wavelength

** For the wavelength range 1500 - 2200 nm we recommend to use the highly sensitive IR detector "Extended IR PD SELECTED"

pulseCheck Specifications

| Specifications | |
|-------------------------------|---|
| Measurable Pulse Width Range | Depending on Base Unit: < 10 fs 3.5 ps < 10 fs 12 ps < 50 fs 35 ps < 100 fs 500 ps |
| Wavelength Range | 200 nm - 12 µm, depends on Optics Set |
| Optics Sets | Exchangeable |
| Detector (Optics Sets) | PMT, PD, or TPA |
| Delay Resolution | < 0.001 % of scan range; pulseCheck SM 1 fs |
| Delay Linearity | < 1 % |
| Sensitivity | Typically 1 10 ⁻⁶ W ² depending on Optics Set* |
| Recommended Repetition Rate | PD, TPA: 10 Hz and above; PMT: 250 kHz and above |
| Type of Measurement Mode | PMT, PD : non-collinear intensity, collinear interferometric; TPA: hybrid collinear intensity |
| Mode Switching | Available for PMT, PD |
| SHG Tuning for Phase Matching | PMT/PD: automatic; TPA: not applicable |
| Trigger Mode | TTL, f < 50 kHz; pulseCheck SM < 10 kHz |
| Input Polarization | Linear horizontal, vertical available as option |
| Input Beam Coupling | Free-space; Option: fiber coupling FC/PC, FC/APC, SMA |
| Max Input Power | 1 W (e.g. oscillator with a rep. rate of approx. 70 MHz) or 10 μJ (e.g. amplified system with rep. rates in the kHz range), whichever results in lower value |
| Input Aperture | 6 mm (free-space) |
| Software | Included; Real-time display of pulse width and central wavelength, different fitting routines |
| Fitting Routine | Gaussian, Sech ² , Lorentz |
| Connection | USB |
| Remote Control | Possible via TCP/IP (SCPI command set) |
| Calibration | NIST traceable calibration certificate included |

Options

- Various Optics Sets incl.
- detector • Fiber coupling
- Polarization rotator

Dimensions and Power

| Dimensions | 250 x 190 x 315 mm (pulseCheck 15 / 50) |
|------------|---|
| | Different dimensions for pulseCheck 150 and SM series (See appendix for details) |
| Power | 95 240 V, 50 60 Hz, 60 W |

 * Measured sensitivity including Optics Set, defined as average power times peak power of the incident pulses P_{AV} * P_{Peak}

** Except for pulseCheck SM models
