

## Data Sheet SWIR Camera

The camera is a highly sensitive infrared camera (SWIR, NIR). The sensitivity interval reaches from 900 nm to 1700 nm. A sophisticated, thermal optimized housing allows sensor operation without active cooling. The optional available M42 to C-mount adapter extends the number of lenses which can be used with this camera. Via standard USB2.0 interface can be controlled by each PC or notebook. The 14-bit A/D converter provides high dynamics of captured image data. Correction procedures specially adapted to properties of InGaAs sensors assure very high image quality. In order to increase sensitivity and to extent reasonable exposure time there is the optional possibility to cool down the sensor to 0°C.
